

How to Create a Clean-Air Room Quick Guide

Printable family reference - FireSeasonWellness.com

TODAY

- ☐ Pick a bedroom or living area that can close off and fit the people who need it.: Keep exits clear and include needed medicines, water, and comfort items.
- ☐ Close windows and exterior doors and set HVAC or window units to recirculate when possible.: Do not seal the room in a way that blocks a safe exit.
- ☐ Use a properly sized portable HEPA cleaner or a compatible high-efficiency HVAC filter.: Run filtration as continuously as practical and replace dirty filters.
- ☐ Seek a cleaner, cooler location if the room becomes too hot, power fails, symptoms worsen, or authorities order evacuation.: A clean-air room is only for situations when it is safe to remain home.

REMEMBER

- ☐ Choose one comfortable room today, close it off from outdoor air, and make a plan to filter the air without creating additional indoor pollution.
- ☐ Follow official evacuation orders, local public-health guidance, and individual medical or veterinary advice.
